

Mounds Lake Project

What is the role of the Mounds Lake Commission?

The Mounds Lake Commission will be a newly created government unit consisting of representatives from each of the impacted government bodies within Delaware and Madison counties. The role of the commission will be to oversee and direct the process to advance the Mounds Lake project. If successful the commission's efforts will ultimately lead to the construction of Mounds Lake and the development of a public utility to finance the project.

As a recognized government unit, the Mounds Lake Commission will be subject to the same public transparency requirements as other government bodies such as town, city and county councils. The commission will have no taxing authority, but could utilize funds from the water utility for various purposes including maintenance and operation of the reservoir. A resolution and proposed ordinance are contained in the CED Community Report.
